THE WOOD SWIM

BY RICHARD M. COOPER

THE WOOD SWIM

It is a well known fact that the best swimmers are those who have been born in the water. This is true of all animals, but it is particularly true of the wood swim. The wood swim is a small, fast-moving fish that is found in the streams and rivers of the eastern United States. It is a member of the carp family and is closely related to the carp, the minnow, and the shiner. The wood swim is a very active fish and is known for its great speed and agility.
